

LEAD OPPONENT SCOUTING REPORT

Opponent: Washington Huskies
Date of Match: 09/26
Compiled By: Soham Mukherjee
Opponent Record: 4-2-3 in Fall 2025 (latest match was a 1-0 defeat to Michigan)

Overall Team Overview (over last 5 games):

Washington averages 55.14% possession, building through their back four and central midfielders (#6, #26). When pressed, they use their #10 as an outlet—a proactive dribbler who often drifts wide. They attack through both flanks but favor the left, where #10 (113 dribbles) frequently isolates defenders. #7 typically plays deeper, linking play with probing passes and drifting centrally to support or sit behind the #9. #14, highly active and leads in aerial duels and possession recoveries/losses, will likely start at right wing, with #5 at right back. On offensive set pieces, key aerial targets are #3, #4 (1 goal each) and #14. Defensively organized, they are consistently exposed on the right—each of their last six goals conceded originated from that side, including a conceded penalty vs. Michigan. Despite strong wing play and finishing, they’re vulnerable to right-flank overloads and diagonals.

Passing matrix vs Michigan

PPDA	8.4	Aggressive press, aiming to win the ball in advanced areas
Average Possession %	55.14%	Despite favoring long direct play, able to possess and control tempo when needed
Passes per Possession	3.33	Quick transitions from short passes to direct attacking outlets (#10, #9)
xG per 90	2.31	High attacking output through direct wing play and central finishing
Passes to Final Third	66.72%	High volume and accuracy of forward passes to attacking zones
Offensive Duels Won	41.74%	Below average; compact defensive setups can succeed in 1v1 and 2v1 situations

In Possession:

- Shape: 4-3-3 or 4-2-3-1
- Builds through back 4 and CMs (#6, #26); GK moderately involved
- Left side favored (LB #17 active, #10 for dribbles)
- #6 pushes forward, joins attack
- #9 joint top scorer, through ball target, runs in behind

Out of Possession:

- Defensive shape: 4-4-2 or 4-2-4
- High PPDA ~8.4; press triggers high up the pitch
- Vulnerable to counters (space left behind)
- Right-side defensive weakness, goals conceded from crosses, cut-ins, shots

Key Players:

- #9 – Charlie Kosakoff (ST)
 - 4 goals, right footed
 - Target on through balls
- #6 – Zach Ramsey (CM)
 - 4 goals, left footed
 - Fast ball carrier, deep runner

AI Perspective: Confirms Washington's left-flank bias and right-side defensive vulnerability, backed by 113 dribbles from #10 and all recent goals conceded from the right. It adds that high xG (2.09) and shot volume (14.56/game) throughout the season reflect strong chance creation, but frequent crosses and possession reliance may lead to predictability.
